

NTT TechnoCross Procurement Policies

July 2022

Procurement Policies

NTT Group has established the “NTT Group Global Sustainability Charter” and is conducting initiatives to achieve both “growth as corporations” and “solving societal issues,” in order to realize a “sustainable society.” Modern supply chains are rapidly becoming more global and complex, and it has become critical issue for us to respond to global problems involving human rights, ethics, the environment, disasters, pandemics, and security.

In response to these issues, NTT Group intends to contribute independently and proactively to the realization of a sustainable society. We will do this by deepening mutual understanding and building relationships of trust with all suppliers that comprise our supply chain. Furthermore, we will continue to work with all our suppliers toward building and maintaining a safe and secure supply chain, including protecting human rights and conserving the global environment, based on our high ethical standards.

Therefore, we will implement procurement based on the following procurement policy.

- NTT TechnoCross will strive to provide competitive opportunities with fairness to suppliers, and to build mutual trust and understanding.
- NTT TechnoCross will conduct economically rational procurement of competitive goods and services that meet its business needs, deciding suppliers based on quality, price, delivery times and stable supply in a comprehensive manner.
- NTT TechnoCross will contribute to realizing a sustainable society by doing procurement with an emphasis on human rights, the environment, safety, and other critical issues, in compliance with laws and social norms.

To Our Suppliers

Having established “NTT Group Global Sustainability Charter” and the “NTT Group Global Human Rights Policy”, the NTT Group is promoting various efforts to address human rights problems and other issues in order to achieve corporate growth, solve social challenges, and realize a sustainable society.

The NTT Group has also published the “NTT Group Guidelines for Sustainability in Supply Chain” and the “NTT Group Green Procurement Standards” to promote initiatives aimed at achieving a sustainable society in the supply chain. The NTT Group also conducts supplier engagement activities to ensure that all suppliers in the supply chain comply with these guidelines.

By continuing these activities, the NTT Group will proactively and proactively work with its suppliers to resolve social issues by building and maintaining a trusted supply chain and contribute to the realization of a sustainable society with the understanding and cooperation of our suppliers.

Please observe the following guidelines when dealing with NTT TechnoCross.

| NTT TechnoCross Guidelines for Sustainability in Supply Chain

NTT TechnoCross has published the “NTT TechnoCross Guidelines for Sustainability in Supply Chain” as a document in which NTT TechnoCross asks its suppliers to comply with the ideal supply chain in consideration of social issues such as human rights, the environment, safety, etc. These guidelines specify the measures that each company in the supply chain should take on its own initiative to realize a sustainable society.

| NTT TechnoCross Green Procurement Standards

The “NTT TechnoCross Green Procurement Standards” are published to supplement the environmental content of the “NTT TechnoCross Guidelines for Sustainability in Supply Chain”. These standards describe the outline of the NTT Group's environmental activities, items that suppliers should consider, refer to, and strive for, laws and regulations, and evaluation items for suppliers and products in procurement.
